TEAM NAME (REGISTERED ON PORTAL)

LABOURLINK [confirm portal spelling]

Connecting Communities with Verified Cooperative Workers.

User-supplied 2026 branding · official approval and team details require confirmation.

IDEA TITLE

LABOURLINK

Proposed Solution (Describe your Idea/Solution/Prototype)

Detailed explanation of the proposed solution

- Societies import, verify and manage their worker rosters.
- Households book services; institutions request multiple workers.
- Workers review terms, accept work and track earnings.

How it addresses the problem

Society records → verified profiles → suitable matches
→ completed services → transparent settlement

Innovation and uniqueness of the solution

- Society-controlled verification and approved policies.
- Separate payment, earning and settlement records.
- Capacity-aware coordination across participating societies.

Affiliation + authority; no mandatory middleman.

Six experiences: Household · Institution · Worker · Society · District · National

Technologies to be used

(programming languages, frameworks, hardware)

- Frontend: React + TypeScript; EN / HI / GU.
- Planned backend: FastAPI.
- Planned database: MongoDB + geospatial indexing.
- Future authorized providers: payments, OTP, maps, voice, welfare.

Methodology and process for implementation

(Flow Charts/Images/ working prototype)

Import → verify → match → book → accept
→ complete → record payment → reconcile

Matching: skill + availability first; then distance, experience, rating and workload.

Forecast: history → demand baseline → capacity gap → admin review.

Worker verification · synthetic prototype

 Membership evidence Society roster reference: SAB-1001	☒	 Identity reviewed Synthetic identity placeholder	☒
 Trade assessment Pumping · society assessment	☒	 Certificate reviewed Optional certificate placeholder	☒

Separate settlement ledger · synthetic prototype

Booking amount · approved quote v1	₹500
Worker earning	₹450
Approved society allocation	₹50
Cash / payment holder	None

Prototype scope: synthetic data and simulated handoffs. No live payment, government-data connection, backend or production AI claim.

FEASIBILITY AND VIABILITY

Analysis of the feasibility of the idea

- Start with participating societies' own records—not assumed government worker-data access.
- Begin with one society and selected household/community services.
- Agree cooperative operating charges; do not assume a universal commission.

Potential challenges and risks

Strategies for overcoming these challenges

Incomplete worker records	Validated imports, review queue, verification history
Language / digital-literacy barriers	Simple multilingual screens and assisted onboarding
Overbooking / bulk shortfalls	Time checks, reservations, partial-fulfilment review
Cash, no-shows, payment disputes	Separate ledgers, evidence trail, society review

PROPOSED PILOT — NOT ACHIEVED: 1 society · 100 workers · 300 requests · target ≥90% completion.

Production gate: governance, worker terms, pricing, legal obligations, data consent and provider access.

IMPACT AND BENEFITS

Potential impact on the target audience

Workers

Clearer terms, visible earnings, skill records and welfare guidance.

Societies

Organized rosters, allocation tools and settlement visibility.

Customers

Discoverable cooperative workers, price visibility and traceable complaints.

Federations

Authorized capacity and skill-gap summaries—not control over every job.

Benefits of the solution (social, economic, environmental, etc.)

Social: accessible, accountable participation.

Economic: aim for less idle time and clearer payments.

Environmental: test travel savings from nearby matching.

Governance: documented, approved cooperative decisions.

MEASURE: completion · utilization · assignment time · settlement delays
complaint resolution · worker net earnings after reported costs

Digitize the workforce. Keep the cooperative in control.

Details / Links of the reference and research work

- 01 **SIH PS 26089 — organizer-provided statement**
Confirmed portal URL required; title and theme supplied by the team.
- 02 **[Ministry of Cooperation — National Cooperative Database](#)**
Society information and ecosystem planning; not a worker roster API.
- 03 **[Haryana Labourfed — About Us](#)**
Documented society/district/state example—not a universal hierarchy.
- 04 **[International Cooperative Alliance — Cooperative Identity](#)**
Member ownership, democratic control and autonomy.
- 05 **[e-Shram — Official FAQs](#)**
Registration and welfare facilitation; scheme eligibility remains separate.
